

Datasheet

2N IP Licenses

The 2N IP intercom delivered as basic version is equipped with the necessary basic functions. Additional features can be activated anytime via a license upgrade. Only the **2N IP Uni and IP Base** as entry model cannot be extended by any other features via license upgrade.

A combination of different licenses is possible. To request one or more licenses, please contact our sales team and keep the serial number of the respective 2N IP intercom at hand.

For testing purposes, the gold license can be activated once as test version in any 2N IP intercom (except IP Uni and IP Base) for 800 hours. After the trial period the functionality automatically resets to the basic version.

Simple and Understandable - The New 2N Intercom Licensing.

The licensing policy is simplified considerably from **2N OS version 2.35** on with you and your needs in mind: increasing not only the value of our intercoms, but the level of service you're able to deliver included in the product price.

Fuss free, easy to explain licensing scheme

Customers can be tricky, as can be their queries and demands. We're sure you've sometimes struggled in choosing which license best satisfies your customer's needs – but now, you'll no longer have to memorize all the advanced features and their relationship to licenses.

Simply upgrade the intercoms to 2N OS version 2.35 and **some previously licensed features will now be included in the price of the device** - so you won't even have to think about them!

Does your customer want or need more than just the basic features? Then offer a **Gold license** - the package of premium features ideal for complex integrations, including video settings and lift control.

More for free! Lots of features available by default

The global concern for cybersecurity is always on our minds, as we're sure it's on yours, too. That's why we've decided to include **all previously paid security features to the IP intercom by default**, to support you in deploying truly secure systems.

But it's not just about **cybersecurity** - we understand enhanced audio features should be a standard feature in high-quality devices – and at 2N, we only sell high quality devices. **So, enhanced audio features will now be enabled by default as well.** And what's more – we've also enabled **NFC support and HTTP API** without you having to pay a single cent.

The 2N Access Unit will not need any additional licenses, the entire feature set will be enabled by default.

Overview of licenses:

License name	Order number	Included Features	Notes
For free	---	All from previous Enhanced Audio and Security licenses, NFC, HTTP API	Included in each device
Gold	9137909	All from previous Enhanced Integration and Video licenses, Lift module	Available
